

Safety & Security **centralization**

What is ViMS Suite?

ViMS is a VMS & PSIM platform that centralizes the management of a wide range of security devices in a single operational environment

The **ViMS Suite** is a **modular and scalable** solution that enables the management of Safety & Security technologies **varying by brand, type, and generation** through an **integrated software interface**.

ViMS supports Operations Centers in their security activities through **advanced features for managing on-field devices and events of interest**, effectively adapting to the security needs of modern organizations in both **single-site and multi-site** scenarios.

VIDEO SURVEILLANCE

ACCESS CONTROL

INTRUSION & FIRE

PLATE READING

INTERCOM & VoIP

ARTIFICIAL INTELLIGENCE

EVENT VALIDATION ENGINE (EVE)

EVE is the new ViMS feature that leverages **Artificial Intelligence to filter, validate, and structure data** received from the deployed security systems.

AI-based event validation **reduces false positive alarms, speeds up decision-making, and improves the quality** of the information available to operations centers.

Operational benefits of ViMS

CENTRALIZED SECURITY

The ViMS platform allows the **integrated management** of a potentially unlimited number of safety & security devices, without imposing technological limitations..

Each technology is managed through the same interface, **establishing advanced synergies across the different areas of Safety & Security.**

FLEXIBILITY AND SCALABILITY

ViMS ensures **full compatibility with both new and existing security infrastructures** without requiring major structural changes.

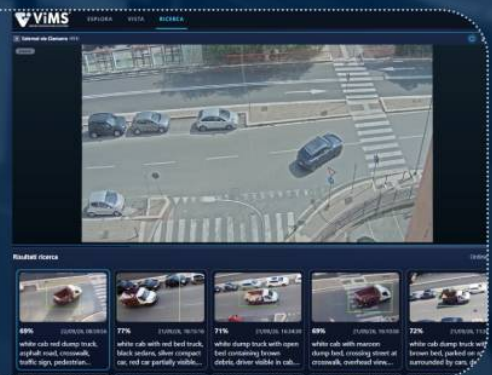

Its high level of **customization** allows it to be adapted to any project or operational requirement, simplifying the management of specific individual needs.

IMMEDIATE ANALYSIS OF EVENTS

ViMS enables in-depth analysis of the available security information, providing a **comprehensive and contextualized view** of each event.

The integrated management of alarms, video streams, and operational information – supported by **advanced automations for investigating events** – simplifies assessment and facilitates more effective responses.

OPERATIONAL EFFICIENCY

ViMS **minimizes false positives and reduces workload in Operations Centers**, streamlining security procedures.

Automated workflows and standardized processes effectively support the different types of users with **intuitive, comprehensive, and innovative tools.**

Application scenarios

A single software solution, countless operational possibilities for Safety & Security

The ViMS Suite is used to manage security in several private and public sectors, ensuring **operational effectiveness and utmost adaptability** to the specific needs of each organization.
